PROJECTS

1. Automatic Traffic Control System For An Ambulance —

In this project i build a system that can track an ambulance and change traffic signal lights to give a fastest road towards hospital. I used WSN technology to bulid this project.

2. Home Automation System —

The Purpose of this project is to control the appliances inside our home such as a light, fans, water pump etc which leads it to the smart home automation system.

3. Fire Alram System —

Fire Alram Circuit is a simple circuit that detects the fire and activates the sound or Buzzer. It's a important device for industry and any kind of places where people and expensive products are available.

4. Movie App —

I developed a movie app Website using HTML ,CSS and JS Web API.

5. Front-end Websites Develope —

I have a done a projects where i dveloped 12 websites front-end clone like Facebook, Netflix, Hulu, Airbnb, Godady etc.
